The sound most commonly denoted by the letter in English, as in Latin, is the double sound /ks/. Yy

Y, y /wʌɪ/.
The twenty-fifth letter of the modern English alphabet and the twenty-second of the ancient Roman one, repr. Greek upsilon, a differentiated form of the early Greek vowel symbol, now also represented by U and V. Y was originally used in Old English to represent a fronted *u*, which in Middle English merged with short *i*. After the Norman Conquest the fronted *u* was increasingly represented by U, following French orthography, resulting in Y being used as an alternative to I, esp. where legibility might be improved by its use. After the introduction of printing Y gradually became used according to the following conventions: (i) in final position (***fly***, ***family***, ***destroy***); (ii) before *i* in inflectional forms of verbs (***lying***, ***tying***); (iii) in the plural of nouns in *-y* preceded by a vowel as (***boys***, ***rays***, ***alleys***); (iv) in words from Greek, transliterating upsilon (***hymn***). Y was occasionally used as an alternative to *th-*, as in *ye* for *the*, deriving from its similarity when handwritten to þ (thorn) (cf. **TH**). In Middle English it was also used to represent the letter yogh (ȝ), finally taking its place in all but a few words which dropped it entirely. Pl. **Y's**, **Ys**.
